EDUCATION

University of the East (UE) - Caloocan

Aug 2023 - Present (Expected Jun 2027)

Bachelor of Science (BS) in Computer Science

GPA: 1.04 / 1.00 (Highest) - (Latin Honor Standing, University Full Scholar)

Awards: Philippine Junior Data Science Challenge 2024 - Top 10 Finalist, CodeChum National Programming Challenge 2025 - Semifinalist, Caffeine AI Manila Hackathon - Judge and Mentor, Devcon Game Jam - Top 8, AWS Community Day Manila - Event Co-Organizer

Leaderships: Google Developer Student Club - UE Caloocan (Data Science Lead), Technical Support - Jesus Is Lord Caloocan, Association of Computer Studies Student - UE Caloocan (President), AWS Learning Club - UE Caloocan (Vice-Chief Operation Officer), AWS Cloud Club Philippines - Data Analyst, AWS User Group e:Novators Philippines - Ambassador

TECHNICAL SKILLS

Programming & Development: Python (Pandas, NumPy, Matplotlib, OpenCV), C++, MySQL, HTML, CSS

Data & ML Tools: Scikit-Learn, Tensorflow, Roboflow, Ultralytics, Kaggle, Jupyter Notebook, Google Colab, Pydantic, Chroma

AI & Process Automation Tools: Microsoft Power Platform (BI, Automate)

LLM & Prompting: Langchain, HuggingFace, Claude Code, Gemini

Productivity: Microsoft Office (Word, Excel, Powerpoint), Github, Power BI, Visual Studio Code

PROFESSIONAL EXPERIENCES

RivanAI Cybersecurity Inc.

2026

AI Security Intern | Project-based Program

- Engineered and executed **advanced adversarial simulations**, including direct and indirect prompt injection attacks and data poisoning vectors, to proactively identify vulnerabilities.
- Spearheaded the secure development and deployment of Large Language Models (LLMs), implementing technical safeguards and **mitigating adversarial risks** across data pipelines, training phases, and inference layers within hybrid infrastructure defending against prompt injections.
- Developed custom ransomware executables** to simulate real-world social engineering and extortion campaigns, providing realistic threat modeling to evaluate and strengthen the organization's defensive posture and incident response readiness.

PROJECTS

Cross-Encoder Reranking RAG Model Chatbot | RivanAI

May 2026 - June 2026

- Developed a production-grade Retrieval-Augmented Generation (RAG) system implementing **LLM-based intelligent chunking, query rewriting, and reranking techniques**.
- Built native Python implementation integrating ChromaDB vector database with HuggingFace embeddings (all-MiniLM-L6-v2), **custom Pydantic models** for structured output, and parallel processing for efficient document ingestion and preprocessing.
- Created comprehensive vector space visualizations using **t-SNE dimensionality reduction (2D/3D)** with Plotly to analyze document clustering patterns and validate embedding quality across multi-category knowledge bases.

n8n Automated Lead Orchestration Pipeline

June 2026

- Architected an automated CRM pipeline** using n8n to ingest new business inquiries via webhooks, reducing initial response time from hours to under 2 minutes.
- Integrated Groq Chat Model** to perform semantic analysis on unstructured text, automatically extracting service categories, calculating lead sentiment scores, and generating concise project summaries.
- Developed custom JavaScript data-transformation modules** (n8n Code Node) to parse complex JSON payloads and dynamically route leads via Switch logic based on budget thresholds and AI categorization.

- **Engineered an automated document generation engine** that injects real-time lead data into Google Doc templates, converts them to PDFs via the Google Drive API, and attaches them to automated customer emails.
- **Implemented an asynchronous error-handling framework** using dedicated error-trigger workflows to log API timeouts and dispatch instant debugging alerts to Gmail, ensuring 100% data capture reliability.

Road Damage and Defect Recognition NeuroSymbolic Model February 2026 - March 2026

- **Developed a NeuroSymbolic instance segmentation pipeline** using YOLOv8, Roboflow, and Ultralytics library, fusing deep learning perception with symbolic logic rules to accurately classify road degradation.
- Attained highly accurate localization and pixel-level segmentation, recording a Bounding Box **mAP@0.5 of 98.7%** and a Mask **mAP@0.5 of 98.3%**.
- Evaluated model robustness across **100 epochs** using Precision-Recall curves and confusion matrices, successfully minimizing background false positives and ensuring reliable classification across all disease Classes.

Cloud-Based Security Incident & Ticketing Platform | RivanAI May 2026 - June 2026

- **Deployed** an OTRS (Open-source Ticket Request System) environment on **Azure Linux** to centralize incident tracking and streamline security/IT workflows.
- **Integrated Elasticsearch** to enable high-performance data querying, significantly accelerating log analysis, search capabilities, and event triage.
- **Configured and hardened** the cloud infrastructure, ensuring a secure, scalable, and highly available service management pipeline.
